

## **BK10-GL**

## **Biocide**

BK10-GL water treatment micro-biocide is a 50% active high performing micro-biocide for controlling bacteria, slime and fungi present in water systems. The biocide is not affected by H<sub>2</sub>S or bacteria generated acids and will be 100% available to act as a biocide.

BK10-GL is compatible with all oilfield chemicals.

### Features and Benefits

- ✓ Freeze point in excess of -20°C
- ✓ 50% Active solution for cost effective application
- ✓ Not affected by or H<sub>2</sub>S, sulfate or acid producing bacteria
- ✓ Not affected by high pH or high brine waters

### Applications

- ✓ Broad spectrum biocide to control bacteria, yeasts and mold
- ✓ The biocide is applicable in pipelines, production wells, water injection systems, pulp or paper production among others
- ✓ Applicable in fracturing, drilling and completions
- ✓ Run at 25 to 2500 ppm depending on the application
