

SOL30-S8

Sulphur Solvent

SOL30-S8 is a blend of high pH fluid, surfactants and iron control to effectively disperse and dissolve Sulphur. The fluid works best at elevated temperatures.

Features and Benefits

- ✓ High efficacy for Sulphur and mixed Sulphur/oil deposits
- ✓ Typically, a minimum 4-hour soak time is recommended
- ✓ Water based fluid, therefore no fire protection is required and the fluid does not have a flash point

Applications

- ✓ SOL30-S8 works best when BHT is 50°C or greater. Soak times may be excessive if temperature is below this value.
- ✓ SOL30-S8 will dissolve 150 kg Sulphur per cubic meter in optimal conditions
- ✓ Can be spotted down annulus or directly down tubing
- ✓ Volume required is based on amount of Sulphur required to be removed. If only a small volume of SOL30-S8 can be spotted across the deposit, then multiple soak periods are recommended
